and skills development, demand-side activities, interaction and innovation networks, changing institutions and regulations, and the public financing of early stage innovations, its critical and novel perspective serves policy-makers, scholars, and practitioners. This book provides an overview of the key challenges that need to be addressed in order to enhance the effectiveness of the innovative system within the national context. It investigates the role of the government in shaping the innovative system and the implications for policy formulation. The book offers guidance for policymakers and practitioners on how to design and implement effective innovation policies.

National Innovation Systems: China and the Newly Industrialised Economies

This book examines the role of national innovation systems in shaping technological change and economic growth. It explores the unique features of China’s innovation system and compares it with other newly industrialised economies. The book highlights the importance of public policy in shaping the innovation system and the role of international cooperation in promoting technological change.

Holistic Innovation Policy

This book presents a new framework for understanding the dynamics of innovation systems. It argues that innovation is not just a technical process but a social and economic phenomenon that involves the interaction of various factors, including institutions, policies, and social norms. The book provides a comprehensive analysis of the role of government in shaping the innovation system and offers practical recommendations for policymakers.

Demand-Side Policies and Innovation Networks

This book examines the role of demand-side policies in shaping the innovation system. It explores the factors that influence demand-side policies and their impact on the innovation process. The book highlights the importance of policies that stimulate demand for new technologies and products, such as tax incentives and subsidies.
